ZenduMaps Application

ZenduMaps is a mapping application that enables users to create shareable, customisable & public map links which display vehicle GPS location, historical trip data as well as measure vehicle activity against set compliance rules.The route compliance tool also allows the user to view historical data of a snow event or a road patrol shift. This will help the client view and assess the compliance of the vehicles and their activity.

Route Compliance can be based on the trip activity of the vehicle and the GPS location.

Route compliance can also be also be measured on triggers such as plow up/down or Salt Spreader on/off or any other telematics trigger.

Map Builder Tool

The map builder tool is a quick and easy way for a business to share a public map with their vehicle activity directly to their client for access.

Route Compliance Tool

Our route compliance tool allows customers to measure their vehicle activity against a compliance standard.

Shapefile Import Tool

The Shapefile Import tool allows our customers to import a list of zones directly from the file. This also creates the Routes within the system via connecting the zones and their numbers.

ArcGIS Integration

ZenduMaps ArcGIS integrations allows our users to send the vehicles Location/Trip/ Exception data right to your ArcGIS account
